

Top 3 essential Oracle Cloud ERP modules tailored to your business needs

**Blog By – Abhishek Mishra and
Govindarajan Sundaramoorthy**

Oracle ERP offers a comprehensive suite of applications that allow organizations to make informed and insightful business decisions while accelerating performance and reducing costs. Most ERP solutions typically start by addressing financial aspects and subsequently incorporate additional features based on the specific needs of your business, industry requirements, and evolving conditions. It brings business processes together to drive business productivity, boost collaboration, and support data-driven decisions.

With Oracle Fusion Cloud ERP, businesses can leverage cloud technology to gain faster time-to-value and enhance scalability and growth. They can implement new functionality at a faster and more reliable rate compared to conventional on-premise implementations.

Top 3 Oracle Cloud ERP modules

Here's a list of the top 3 ERP modules, how they can help your organization, and why companies decide to use them.

1. Oracle ERP Financials

- Track accounts payable and accounts receivable, managing the general ledger for a clear financial overview
- Generate and store balance sheets, payment receipts, and essential financial documents
- Utilize automation to streamline billing, asset management, vendor payments, expense management, and joint venture accounting
- Interactive financial reporting and ad hoc reports can be developed in GL, and they can be analyzed using the spreadsheet

2. Oracle ERP Procurement

- Improve the ability to purchase the products/materials needed to make/sell goods
- Automate, track, and analyze quotes while helping to prepare and send purchase orders
- Utilize a list of approved vendors to automate purchases of specific items
- Speed up the process, enforcing compliant spending
- Enhance supplier relationships, and ultimately help increase profitability
- Simplify end-to-end procurement and streamline shopping and spending
- Manage direct materials and services purchases
- Uses real-time data for supplier negotiations and contract awards
- Identifies ways to consolidate the purchasing power to secure the lowest cost while reducing supply disruptions

3. Oracle ERP Manufacturing

- Simplify planning and managing production runs for business
- Ensure the availability of raw materials, efficient shop floor operations, and cost control
- Ensure the quality of finished goods, thereby increasing customer satisfaction
- Support mixed-mode manufacturing, allowing the use of a combination of manufacturing processes
- Help diversify your portfolio and attract new customers
